ABOUT THE KRUGER:

Kruger National Park is among the world's greatest nature reserves. It is one of the few places on earth where wildlife can be seen in such great variety and at such close quarters. Some 520 bird, 114 reptile and 146 mammal species, including the fabled Big Five - elephant, rhino, lion, leopard and buffalo, densely populate the park. Although in nature there are no guarantees, in Kruger Park you stand the best chance of thrilling sightings of game. From some of Africa's largest prides of lion, to birds found nowhere else within the country's borders.

The present Kruger Park is immense, covering 19,685 km², an area almost the size of Wales or two thirds of Belgium. There are more than 3000 km of roads on which to explore the Park. Obviously in a limited time, one can do only so much, however our experience shows us which are the best roads to take at certain times of the year, ensuring you get the most of your visit to the Park. Our tour focuses mainly on the Central and Southern areas of the park, as it has the largest concentration of game.

CLIMATE:

In winter (April to September) the days are mild (average about 23° C), with sometimes cool nights (down to 6° C). In the summer the days average 30° C, but sometimes exceed 40° C, with the welcome cooling effect of afternoon thunderstorms. Rain in the summer months (October - March i.e. "rainy season") varies from about 800mm in the south, to 500mm in the northern areas.
